

Cardiovascular Health and Vitälzým Testimonials

CARDIOVASCULAR SYSTEM HEALTH

Just wanted to say thanks for your product, Vitälzým. I have had many reports of improvements for various complaints from pains, to swelling of joints, to Raynaud's... being relieved by Vitälzým. Two of the most remarkable were in cardiac patients with claudication of their legs besides the angina they had. One was getting ozone treatments with Calcium EDTA chelation and was no longer having pain at rest. All of his major coronary arteries were completely occluded and Mayo clinic had tried laser, robotic therapy, rotorutter,... and for five years running, he had spent over \$10,000 for a month of failed treatments each year. After three weeks of the above chelation therapy he felt better, but paid a price for exertion. After a few days on the Vitälzým, as well as chelation and ozone saunas, he's back hunting, fishing, hiking... with no pain in his chest or legs.

The other fella was as bad... with angina at rest and claudication on 15 feet of walking, he, too, had the calcium EDTA and ozone saunas and was better, but came in today stating the he was able to walk to the grocery store without having to stop once and didn't even feel a tinge of pain or fatigue just two days after starting the Vitälzým.

My hat's off to your company for such a good response...far better than your competitor. I will continue to refer patients to you for their products.

-- Dan O. Harper, MD, Conrad, MT

I believe systemic enzymes can improve your help. I believe the enzymes keep my cardiovascular system healthy. I also use Vitälzým to help absorb my vitamins and minerals. I feel that it makes them work better. I also believe it helps cleanse the blood. I will use your product for a long time. Your product is great. I have found your formulation works better than others.

-- Tony M, Ocala, FL

My doctor recommended Vitälzým because I have some blocked heart arteries. I am taking 5 capsules 3 times per day and it seems to be helping. My blood pressure has gone down since taking Vitälzým. I would much rather take Vitälzým than have angioplasties.
